

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

PRODUCT

Product:	VALOUR GRAM (GRAM) SEK
Manufacturer:	Valour Inc.
ISIN	CH1161139600
Website:	www.valour.com
Contact:	hello@valour.com

This key information document is valid as at 19 June 2026.

You are about to purchase a product that is not simple and may be difficult to understand.

WHAT IS THE PRODUCT?

Type: The product is a structured investment in the form of a tracker certificate governed by Swedish law.

Term: This product is not subject to any fixed term.

Objectives: The security is an open-ended, exchange traded certificate denominated in Swedish krona (SEK). The product's objective is to provide a daily return that synthetically tracks the performance of the price of Gram (GRAM) in USD (underlying asset), less a management fee component (this fee is currently set to 1.9%) and adjusted for the change in the USD/SEK exchange rate. The value of the security is based on a calculation of an arithmetic average of the last paid prices of Gram (GRAM) in USD on relevant, eligible cryptocurrency exchanges (reference sources) as determined by the calculation agent. This value (reference price) is recalculated from USD to SEK before the multiplier is applied. The result constitutes the theoretical value of the security.

Investors are expected to purchase and sell the securities in the secondary markets on the stock exchanges or MTFs where the securities are listed during the relevant exchange opening hours. In order to hedge its exposure to the underlying digital asset originating from the sale of the certificates, the issuer will purchase the relevant, corresponding amount in the digital asset on a 1:1 basis. Both the issuer and the holder of the product do have the possibility to request early redemption of the securities under certain circumstances, as defined in the base prospectus. Redemption either on the Issuer's initiative ("Issuer Call") or on the investor's initiative ("Holder Put") may cause the securities to be redeemed when the value of the securities is lower than the purchase price of the securities. In both cases the investor will receive a cash amount equal to the Settlement Amount as defined in the base prospectus.

Product Currency	SEK	Initial Fixing Date	22 April 2024
Underlying asset	Gram	Issue Date	8 May 2024
Type of underlying	Digital Asset	Maturity Date (Maturity)	Open Ended (the product has no maturity date)
Asset base currency	USD	Multiplier	0.1
Leverage	1:1	Management Fee	1.9% p.a.
Reference Sources	Three of the most liquid exchanges where the underlying asset(s) is (are) traded. The exchanges used may vary depending on their trading volumes.	Reference Price	Determined by Valour using the arithmetic mean price of the underlying asset across the reference sources

Intended Retail Investor: This product is a complex product and is only intended for informed retail investors who (i) can bear loss of capital, are not seeking to preserve capital and who are not looking for a capital guarantee; (ii) have specific knowledge of and experience investing in similar products (complex securities) and in financial markets; (iii) seek a product offering exposure to the underlying asset and have an investment horizon in line with the recommended holding period stated below; (iv) are aware that the value of the product can change significantly due to the volatile underlying asset and, as a result, have sufficient time to actively monitor and manage the investment and (v) are willing to accept a level of risk that is consistent with the summary risk indicator for this product. This view does not represent an assessment of the suitability of the product for an individual investor.

WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

Risk indicator

The risk indicator assumes you keep the product for the recommended holding period of at least 1 Year. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to sell your product easily or may have to sell at a price that significantly impacts on how much you get back.

The summary risk indicator ("SRI") is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as class 7 out of 7, which is the highest risk class. This rates the potential losses from future performance at a very high level, and poor market conditions are very likely to impact the capacity of the fund to pay you.

To the extent that the currency of the country in which you purchase this product, or the account currency differs from the product currency, please be aware of currency risk. If you buy and trade this product in a different currency, the final return you get depends on the exchange rate between the two currencies. **This risk is not considered in the indicator shown above.**

Poor market conditions are very likely to impact the capacity of the Issuer to pay you. Material risks not included in the summary risk indicator are: lack of consensus on the legal status and regulation of digital assets and risks associated with nascent technologies and digital asset protocols.

This product does not include any protection from future market performance so you could lose some or all of your investment. If the Issuer is not able to pay you what is owed, you could lose your entire investment.

The product mirrors the performance of the digital asset Gram (as defined in the prospectus) which is traded on various digital exchanges and is generally characterized as presenting high risk, but which also allows for the opportunity of high returns. If the product is linked to a single digital asset, the product has a higher risk than other products using the diversification method of investing in a basket of digital assets.

The indicator mainly reflects the ups and downturns in the value of the product. The product can be expected to have large fluctuations due to the nature of the underlying asset class.

This product is a complex product and is only intended for investors who understand the risks involved and have experience investing in similar products.

For detailed information about the risks relating to the product please refer to the risk sections of the base prospectus and any supplement thereto as specified in the section 'other relevant information' below.

Performance scenarios

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the fund completed where applicable by that of its reference framework over the last 10 years. Markets could develop very differently in the future.

Recommended minimum holding period: 01 Year Investment: 10 000 SEK		
Scenarios Minimum:		01 Year (recommended holding period)
Stress scenario	What you might get back after costs	20 SEK
	Average return each year	- 99.8 %
Unfavourable scenario	What you might get back after costs	2 120 SEK
	Average return each year	- 78.8%
Moderate scenario	What you might get back after costs	13 760 SEK
	Average return each year	37.6%
Favourable scenario	What you might get back after costs	130 900 SEK
	Average return each year	1 209.0%

The table shows the money you could get back over the next one year, under different scenarios assuming that you invest 10,000 SEK. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products.

The scenarios presented are an estimate of future performance based on evidence from the past of how the value of this investment has varied and are not an exact indicator. What you will get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you can get back in extreme market conditions and does not take into account a situation where the issuer is not able to pay you back.

Unfavourable: This type of scenario occurred for an investment between 12/2024 and 11/2025.

Moderate: This type of scenario occurred for an investment between 11/2022 and 10/2023.

Favourable: This type of scenario occurred for an investment between 01/2017 and 12/2017.

The displayed figures include all costs for the product itself but does not include any costs that you may have to pay to your adviser or distributor. The figures do not take into account your personal tax situation, which can also affect how much you get in return.

WHAT HAPPENS IF Valour Inc. IS UNABLE TO PAY OUT?

In the case of default by the Issuer, the assets it holds as collateral may be realized in order to meet its obligations to investors and the cash proceeds of this will be paid out in the order of priority of payments applicable to the product. These proceeds may not be sufficient to meet all obligations and make all payments due in respect of the securities. In these circumstances, you may not be able to realize the full value of your securities, and this may result in you losing some or all of your investment. There is no compensation or guarantee scheme in place which may offset all or any of this loss.

WHAT ARE THE COSTS?

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and should show you the impact that all costs will have on your investment over time. The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself for the recommended holding period. They include potential early exit penalties. The figures are estimates and may change in the future.

Costs over Time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods:

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.

- SEK 10 000 is invested.

The entity distributing this product to you or advising you about this product may charge you other costs. If so, this person will provide you with information about those costs and show you the impact that all costs will have on your investment over time.

Investment: 10 000 SEK	If you exit after 1 Year
Total Costs	194 SEK
Cost Impact	1.9 %

*This illustrates the effect of costs over a holding period of less than 1 year. This percentage cannot be directly compared to the cost impact figures provided for other PRIIPs.

Composition of Costs

One-off costs upon entry or exit	If you exit after 1 Year
Entry costs	The impact of the costs you pay when entering your investment on exchange
	N/A

Exit costs	We do not charge an exit fee for this product, but the person selling you the product may do so.	N/A
Ongoing costs		
Management fees and other administrative or operating costs	The impact of costs we take each year from managing your investment.	194 SEK
Portfolio transaction costs	The impact of costs of us buying and selling the underlying investments for the product.	N/A
Incidental costs taken under specific conditions		
Performance Fee	No performance fees apply to this product	N/A

*Retail investors who purchase the product on the secondary market conclude trades directly with a participating broker or via an exchange and therefore additional costs may apply. These costs are publicly available on the stock exchanges on which the product is listed or can be requested from online brokers.

HOW LONG SHOULD I HOLD IT AND CAN I TAKE MY MONEY OUT EARLY?

Recommended minimum holding period: 1 Year

Sudden changes in value may be frequent and abrupt, due to the highly volatile nature of the underlying type. The value of the product should be monitored constantly.

You are able to sell the product in the secondary market on the relevant stock exchanges where the products are listed. Both the issuer ("Issuer Call") and the holder ("Holder Put") of the product do have the possibility to request early redemption of the securities under certain circumstances.

HOW CAN I COMPLAIN?

In case of any unexpected problems in the understanding, trading or handling of the product, please feel free to contact Valour directly.
