Risk and Reward Profile

This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.

The Fund has been classed as 6 because its volatility has been measured as above average to high.

This indicator is based on historical data and may not be a reliable indication of the future risk profile of this Fund.

The risk and reward profile shown is not guaranteed to remain the same and may shift over time.

Please note that even Funds with the lowest rank may lose you money.

- Concentration Risk - A limited number of investments may be held which has the potential to increase volatility of performance.
- Equity Risk - The Fund invests mainly in shares, and the value of these may fall or rise due to a number of factors, including the performance of the company and general stock market and exchange rate fluctuations.
